Elisa,

It was a pleasure talking with you today. As promised, here are the three items from me:

1. Demo GAITS portfolio, admin access.

This is the demo platform we developed to manage a portfolio of innovation projects:

<https://www.gaits.org/web/portfolio-demo>

You will get a login invite using the above email address and the one-time password Password1 (case sensitive) as credentials. Once in, open the Portfolio tab to see the status of each team site and drill into any one of them. All data is fabricated, so change anything you like. The Members tab lets you add classmates.

2. Cairn-Ai environment overview.

Attached is an overview of Cairn-Ai, a set of AI agents I am building to help teams apply the innovation frameworks published at GAITS.org. A limited pilot is underway. It is not in production.

3. Draft article

Attached is an article outlining my advice to teams on how AI exposure will affect medical device and digital medicine teams. I will post with an introduction on LinkedIn and linking to the full version on GAITS.org. I welcome any comments.

Let's set up a call sometime next week after you have had a chance to review. Send me a few times that work for you and feel free to send questions in advance..

Best,

John

Elisa,

Thanks for reaching out and I'd be happy to explore how I can help. I have been spending a great of my own time examining the impact AI will have on healthcare innovation as well as agents to help teams implement the frameworks I've developed.

I'd be happy to arrange a Zoom call at your convenience. I happen to be available today until noon and then again staring next week. Let me know what works for you.

Best,

John

Subject: CIMIT I AI project proposal

External Email - Use Caution

Good morning,

My name is Elisa Celli, and I am an MPH student in Health Management at Harvard Chan. I am currently taking a course focused on how organizations can responsibly adopt AI, and our semester project involves partnering with a mission-driven organization to understand a real operational challenge and explore where AI may or may not be useful.

Given CIMIT's work at the intersection of healthcare innovation, technology, and improving patient outcomes, I thought there could be a potential fit.

My background is a combination of technology and healthcare. I started my career as a Cloud Solutions Architect at Microsoft and later moved into public health and biotech, where I now work in Patient Advocacy and Data Science. In my current role, I have worked on improving knowledge-sharing processes, introducing AI-enabled workflows, and helping teams think through how new technologies can actually be adopted.

For this project, we would love to understand whether there are any organizational processes where AI could help reduce burden, improve information management, or support decision-making while keeping appropriate human oversight.

The goal is not simply to build a tool, but to work with an organization to thoughtfully evaluate where AI creates value and where it may introduce risks.

I would love the opportunity to briefly discuss whether this could be relevant for CIMIT or if there is someone else within your network who may be a better fit.

Thank you very much for your time.
