

CURRENT STATE · 14 STEPS · TOP TO BOTTOM

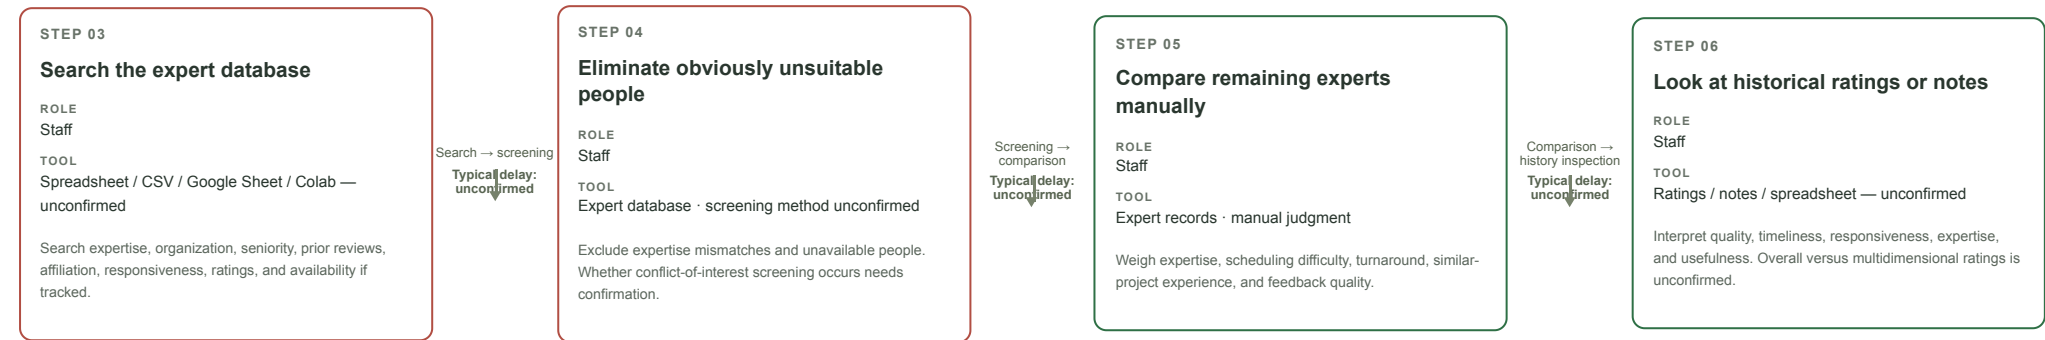

Expert reviewer matching — as it currently runs

From proposal intake to reusable review history. Each box preserves one numbered step from the supplied process; role and tool assumptions are labeled.

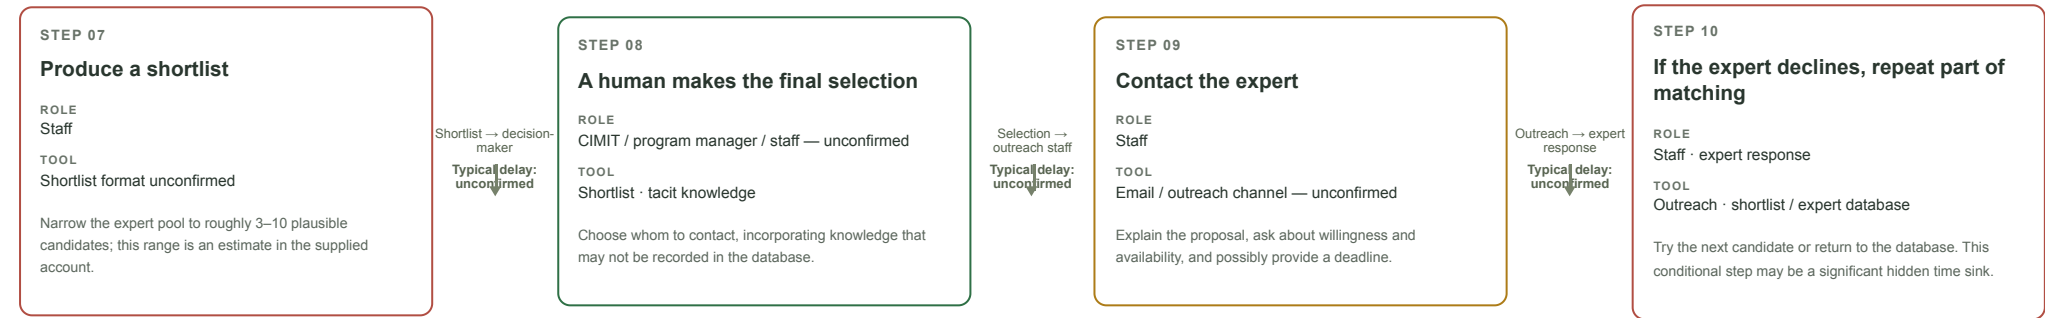

PROPOSAL INTAKE · REQUIREMENTS

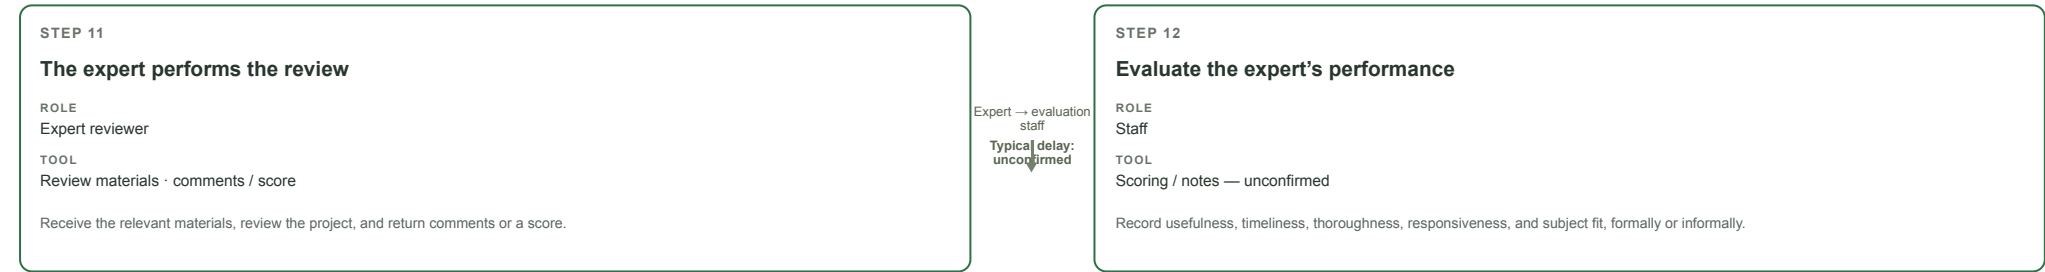

EXPERT SEARCH · ASSESSMENT

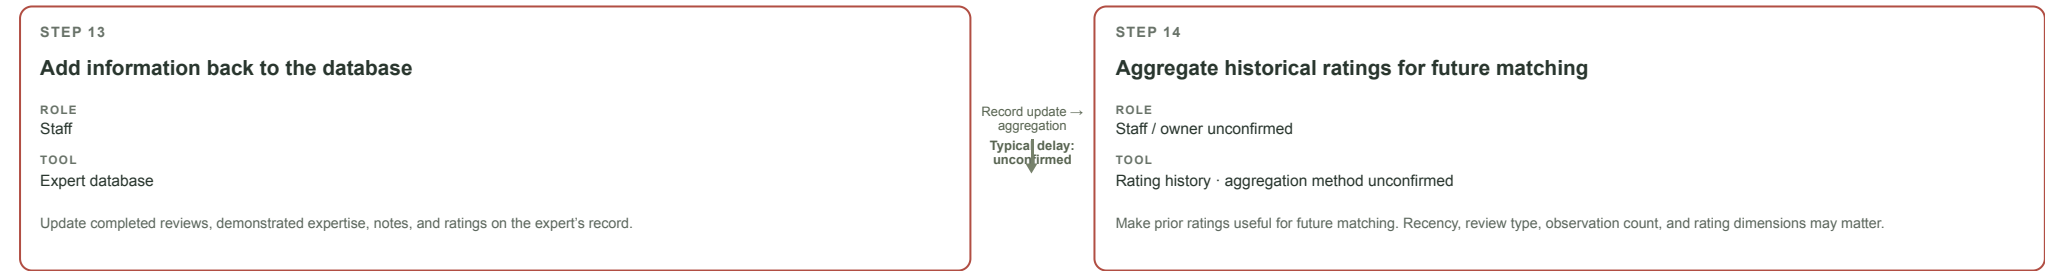

SHORTLIST · SELECTION · OUTREACH

EXPERT REVIEW · PERFORMANCE FEEDBACK

DATABASE · LEARNING FOR FUTURE MATCHING

Yellow · unconfirmed Red · bad friction Green · good friction → Next step / hand-off · delay on arrow

This current-state map follows the 14 numbered steps exactly, from receiving a proposal through aggregating reviewer history for future matching. Staff translate the project into requirements, search and assess experts, create a shortlist, select and contact a reviewer, then evaluate the completed review and return that learning to the database. Step 10 retains the conditional decline-and-rematch activity within its original position; it applies only if the expert declines. Roles and tools reflect the supplied account and remain qualified where uncertain. Typical delays and good/bad friction markings were not supplied, so they are explicitly unconfirmed and can be entered on the map.

Reading note: the shorter summary in the source differs from the numbered account. This map uses the numbered account to avoid adding, merging, or reordering steps. Edits stay in this tab until you save an updated HTML file.
